

## **Xenon Levitation by Ralf Rudolph - Video - DOWNLOAD**

With this tool, you are able to gently float small objects such as matches, feathers, playing cards, sponge balls or rubber bands, etc. a few centimeters above the table.

Easy to build. Not for live performances! Use the gimmick for Zoom, Instagram, or similar. Also very suitable for demo videos to let business cards gently lift off the table. Don't use it as a magic trick. Rather as a science experiment.
