Calculetter 2.0 by Toby Z. - Video - DOWNLOAD

More visual. More intuitive. More powerful.

"Calculetter is a versatile tool that delivers a really fun, visual routine! I will definitely use this."
 - David Jonathan

  Calculetter 2.0 is a major evolution of the original, designed to deliver a smoother, cleaner, and more impactful experience. It allows you to visually transform numbers into any texts or emojis directly on the spectator's iPhone calculator.

Used borrowed iPhone. No Apps. Just powerful, organic magic that feels completely real.

Imagine this...

A spectator freely thinks of any playing card. The magician introduces the idea that each card can be represented by a secret code, a numeric cipher used by magicians. With the spectator's iPhone in view and untouched by the magician, a string of numbers mysteriously appears in the calculator app. Moments later, those numbers transform into the exact card the spectator merely thought of.

  The effect can be repeated with different spectators and different choices, produce any texts in any language.

 What's new in Calculetter 2.0

- **More visual** Texts or emojis appear clearly and directly on their iPhone calculator, making the transformation stronger and more magical.

- **Easier to use** Faster and simpler. No complicated DIY is needed. You can be performance ready within seconds on spectator's iPhone.

- **No app installation required** Do everything on borrowed spectator's iPhone using the built in calculator.

- **Supports any language and emoji.** You can perform the effect multiple times with different outcomes.

- **No fishing.** The spectator freely names any card, and that card appears right on their screen. No guessing games, no outs.

- **NFC-Free (optional).** Calculetter 2.0 introduces a method that makes NFC completely optional. This is a clean, modern effect that only uses a borrowed iPhone from your spectator.

Calculetter 2.0 gives you direct, impromptu magic that feels impossible and personal. Whether you're performing Close-up, on the street, or for social media, this tool gives you freedom, flexibility, and astonishing reactions.

Experience the upgrade. Astonish in real time.

Please note: Calculetter 2.0 is designed to run directly on a borrowed spectator's iPhone and requires iOS 18 or higher for full functionality. This effect is not compatible with Android devices.
