

Digital Visions by Matthew Wright - Video - DOWNLOAD

For seven years, **Digital Visions** has been the pre-kicker Matthew has kept a closely guarded secret.

It sits in front of his world-renowned Visions routine - an effect used by top magicians and mind readers around the world - and it has stayed private, used by him and him alone. Until now.

This new release allows for not just one reveal....but two!

Two entirely different methods. Two entirely different reveals. Dovetailing into one routine that builds instead of repeating.

Three incredible performance variations.

A message arrives on your phone. Not an app, not a magic trick - a message, from a friend, with a video attached. You play it. Someone is drawing.

You pause it, right before the drawing is finished. The spectator names a drawing. You press play- the video resumes - and the drawing shown on screen is exactly the one your spectator has in mind.

- 50 pre-rendered videos, built to match the Visions deck perfectly
- No wifi. No rendering. No waiting. Everything is already on your phone
- No AI surprises. You know exactly what the drawing will be, every single time, because it's already made
- Instant - there's nothing to load and nothing to go wrong
- Three different routine ideas, all using the same messenger-style reveal
- A unique input method - the video can be paused and changed right in front of their eyes
- iOS and Android

Digital Visions works beautifully as a standalone effect. But paired with **Visions**, **Visions 20/20** or **Magical Visions**, it becomes something else entirely - one routine, two impossibilities, no repeat method for anyone to work backwards from.

Seven years in the working repertoire. Now in yours.

Beginner level magic. Professional level results.

Note: Digital Visions currently is only supported on the Apple App Store. An Android version is in the works and should be launched soon.
