

Big Bang by Chris Smith - Trick

Big Bang is the ultimate exploding light bulb.

As of June 2009, we're happy to release the latest version of this heart-stopping effect. Additionally, we've redesigned the gimmick to give it an even more modern and sleek appearance.

Place any ordinary light bulb in a clear bag - completely sealing it off. From this point on you never touch the bulb, and spectators can clearly see the bulb and straight through the bag.

Concentrate all of your mental energy on the bulb - IT EXPLODES! This unexpected WHOOOMMPP!! stops the hearts of even the most hardened spectators.

You now are free to hand out the bag of broken shards, or safely dispose of the dangerous fragments in a nearby wastebasket.

Big Bang also allows you to borrow a quarter, and hold it in your outstretched hand in front of the bulb. Spectators can see that other than the bulb, the bag is completely empty. Now, two things happen at once - the bulb explodes as the coin visibly vanishes from your fingertips! You now show that the coin has instantly reappeared inside the remnants of the shattered bulb! This is an incredibly visual vanish and reappearance, all punctuated by the shattering of the bulb.

With Big Bang, you have complete control the entire time. Also, since the explosion happens in a bag, it's safe to perform in any venue - from stage to close-up - and there's never a mess to clean up.

Big Bang comes complete with everything you need - a precision engineered prop, supplies, plus an all-inclusive video CD that covers both performances and explanations - you just supply any regular bulb.

FEATURES

- Spectators can hold the bulb through the bag.
- Do it completely surrounded.

- No special bulb or set up needed. Very simple to perform, so you can concentrate on presentation.
