

Multiplying Carrots - Latex - 1 carrot

The magician shows a small paper bag to be completely empty. A moment later he makes a full size carrot appear from it. He then puts the carrot back into the bag, and crumples it up... the carrot has completely vanished!

- The carrot is extremely realistic and is cm 16 (6,3") long.
- It is a great production item. As it instantly springs back into its full size, you could make it appear from underneath a silk, from a small box, from a production item and so on. Just roll or fold up the carrot, put it in whatever place you want to produce it from and you are set to go. Naturally if you use multiple carrots the production will be all the more astonishing!
