

Multiplying Carrots - Latex - 2 carrot set

EFFECT 1 - The magician shows a small paper bag to be completely empty. A moment later he makes a full size carrot appear from it. He then puts the carrot back into the bag, and crumples it up... the carrot has completely vanished!

EFFECT 2 - The magician shows the audience a carrot and suddenly a second carrot appears from nowhere. He puts one carrot away but instantly another carrot appears, and then another... and another! • Easy to do. Requires only a little practice. • The carrots are extremely realistic and are cm 16 (6,3") long. • They are a great production item. As the carrots instantly springs back into their full size, you could make them appear from underneath a silk, from a small box, from a production item and so on. Just roll or fold up the carrots, put them in whatever place you want to produce them from and you are set to go. Naturally if you use multiple carrots the production will be all the more astonishing!
