

Flying Coins

The performer shows two little cups, and places in each one four coins. Without any suspicious moves, and simply miming an imaginary flight of the coins, one at a time he makes them pass from one cup to the other. At the end, there will be eight coins in one and none in the other!

- Strong impact on every type of public.
- Very easy to do, practically automatic.
- These cups have been designed to work with many coins from most countries. In Europe we recommend 50 cent coins, in the US, quarters are good. You can use the coins that you prefer, favoring the larger ones that nicely fit inside the cups.
