

Outnumbered by Danny Weiser and Matthew Wright - Trick

When two creative minds come together and create magic, you know that the end result will be something special.

Outnumbered is a simple "blind" puzzle solve that will leave your audience amazed!!

Rubik's Cube magic, magic squares, and memory feats are some of the most compelling, believable, and awe-inspiring weapons in the modern magician's arsenal. **Outnumbered** takes all three of those effects and combines them into one pocket-sized, easy-to-perform miracle!!!

An instantly recognizable number puzzle game is handed to a spectator to mix up. The magician then "memorizes" the position of the numbers and turns the puzzle face down as he attempts to solve it without looking. Despite there being almost 20 trillion different combinations, the magician is able to solve the puzzle.

Outnumbered can be "solved" in three different ways. A regular 1-16 solve, a magic square solve, or a seemingly random solve that has already been predicted.

Outnumbered requires no memory work, no need for complicated algorithms, and no skill to perform. The spectator can even perform the solves themselves!

Outnumbered is a custom-made gimmick that does all the work for you and can be handled by the spectator before and after the solve.

Leave your memory and mathematical skills at the door. THIS IS OUTNUMBERED by Danny Weiser and Matthew Wright!!
