

Tractor Beam (Gimmicks and Online Instructions) by John Kennedy Magic

Tractor Beam is a custom designed laser pointer that makes objects move just like science fiction! The YouTube video shows it in action but really can't do justice as to how mind boggling and impossible it looks in real life.

The unit is extremely reliable, and numerous prototypes were made and tested to achieve the final foolproof design.

And it's completely self-contained. No palmed or hidden devices are used, and no advance preparation is needed. Just carry it with you and beam your audience into another dimension whenever you want!

Tractor Beam comes complete and ready to use immediately. John will teach you everything on a YouTube video, including how to:

Move napkins, playing cards, credit cards, etc.

Topple a deck of cards, plastic bottle, salt shaker, etc.

Rotate cutlery, cell phones, and other objects.

Make pencils, Chapstick, and other cylindrical objects roll across the table.

Make a freely chosen card slide out of the deck. Two versions are taught using any deck of cards, even a borrowed deck!

Make a deck cut itself to find a freely chosen card. The deck can be on a table or you can place it on the floor. This is the simplest and most visually stunning version of the "Haunted Deck" ever!

Beam me up, Scotty!
