

Liquid Suspension Tube - Verschwindende und erscheinende Flüssigkeit - Zaubertrick

The performer shows an empty tube, a glass full of colored liquid and a clear glass. The liquid is poured into the tube and magically stays suspended inside the tube!

A silk is then passed through the tube and passes out, without being wet, proving the tube to be empty.

The performer then passes the clear glass through the tube and the glass comes out filled with the missing liquid!

- Easy to do and of great impact for any audience. A children's favourite.
- The tube, the glass and the gimmick are supplied. The silk and magic wand are not included.
- The metal tube is 15 cm (5,9") high and has a diameter of 8.7 cm (3,42"). The glass is made of plastic.
