
INTERCEPTOR by Mariano Goni

Master magician Mariano Goni has done it again!

Interceptor is an app that uses a playing card object detection model to identify the card you show to the phone camera.

You can perform a new "Card to Number" prediction on the spectator's phone without making any suspicious moves. This is the cleanest card-to-number effect of its kind, using normal playing cards.

Additionally, there's the option of sending it to the "Now" system, along with a double prediction routine for two spectators.

It's simple to perform and easy to use.

- Use any normal deck.
- Zero input from the performer (the camera does it for you)
- No calculations, no memory work.
- Magician fooler.
- Three different possible effects(*)
- Personalize it in your language.

"With the help of AI, Mariano Goni has turned 'NOW' into then and 'Interceptor' into the future."

- **Doug McKenzie**

"Interceptor will be your secret weapon. With it, you can not only fool the magician, but also surprise the audience."

- **Hanson Chien**

"You had me dumbfounded!"

- **Coco Magician**

"I have been waiting for an affordable app of this type for a long time! thanks!"

- **Capelo Black**

"When Mariano Goni releases a new app he has my attention, and Interceptor is an excellent example. I want one!"

- **Gaston Quieto**

iOS only (Android version incoming)

- Sending up to three cards to the NOW! or NOW2 system requires an account on one of those two apps.
- Requires iPhone X or up, and iOS 17 or later versions.
