
MYSTERY LED by Carpenter Wong

A magician's house should be filled with wonders. Vintage bells, decks of cards, intriguing puzzles, and impossible objects all have their place. And now, a new addition to your magical room: **Mystery LED**. It appears to be a piece of glass with a movable switch and an LED, but the real magic is inside.

Mystery LED allows you to control the LED light, turning it on or off at will.

Mystery LED's design is elegantly simple, consisting of a piece of glass, a wooden base, a switch, and an LED. These components are easy to assemble and disassemble, and you can confidently hand them over for inspection. The audience can examine all visible components as there is nothing to hide.

It is operated by remote control, allowing instant illumination at your desired moment. The remote control has a range of 5 to 10 meters.

With a rechargeable battery, Mystery LED provides 10 hours of standby time when fully charged.

Each set contains three LEDs in different colors.

Mystery LED is not only a tool for magical entertainment, but it also embodies a beautiful philosophical metaphor, reflecting Wittgenstein's renowned quote, "Belief in the causal nexus is superstition." Fun and profound, it will bring enlightenment to the minds of the beholders.

Features:

- Simple and retro wood grain base design
- Reliable remote triggering
- Detachable main unit for convenient storage and portability

Included in the set:

- Specially designed electronic base
- Three LEDs in different colors
- USB Type-C charging cable
- Ergonomic remote control

-
- Glass cleaning cloth
 - Other accessories

In 2014, Lubor Fiedler presented a similar apparatus in one of his YouTube videos. The method and workings behind it were never published. We express our heartfelt gratitude to Mr. Fiedler for his pioneering effect and his invaluable contributions to the world of magic. Mystery LED is a tribute to his brilliant mind and countless contributions.
