indecx - Pokerdeck

Starting off the new year with a twist! 2023 is for sure going to be a great year, and we are excited to see some extraordinary designs from the playing card community.

ITS Deisgn Studios, who designed the previous Hyper Neon Playing Cards, are back with another unique design. The **Indecx Playing Cards** utilize the entire entity of the deck as a display piece. Almost as if you are entering a gallery showcasing the patterns and lines that run throughout.

Unlike your regular deck of playing cards, the entire box "shows" you the content of the deck with clever layouts that is surely eye candy. The back design features a gradient pattern in the center with dashed lines crossing the background. When you spread or fan the deck, the patterns connect and break apart, forming new shapes. The **Indecx Playing Cards** are designed by ITS Design Studios in Korea. Printed by the United States Playing Card Company with their premium Bee crushed stock.
