
Bit Coin Gaff: Bite Coin (Silver) by SansMinds Creative Lab

SansMinds Magic in collaboration with IPO52 (Patrick Kun and Andrei Jikh)

What is it?

It's a conversation starter! Ask your friends, "*Do you know why it's called Bitcoin?*" pull this coin out of your pocket and take a BITE right out of the solid coin, then miraculously spit it back - instantly! Derived from the classic effect in magic - the Bite Coin. No one carries change nowadays and this is a perfect modern take on coin magic - *it finally makes sense to carry a coin!*

What's included?

Included are TWO (2) Bitcoin Coins (one magic coin and one regular coin) and a leather carrying a wallet that allows you to easily switch the coins without any skill or practice - if anyone wants to be wise and "examine" the magic coin. One of the coins is absolutely normal and "ungimmicked", so they can try searching to their hearts' content - they won't find the secret! We also include a video that teaches you how to do this effect step by step!

This is not a typical Bitcoin coin you see on eBay, Amazon, or your local gift shop. **IPO52 x SansMinds Magic** has come together to craft this masterpiece. They have redesigned the coin from the ground up: crisp new details, high-quality material, and **24K gold** coating. Engineered by hand to make sure the secret stays invisible
