## Ink hole by French Drop

Just ink becomes a realistic hole.

It is like a cartoon. Draw a circle on the surface of the Morgan (replica) with a pen. Naturally, there is no change on the reverse side. It is a normal morgan. However, when you insert the pen into this circle, the pen slowly and directly penetrates through the coin. The reverse side was definitely there until just now. In fact, the obverse is also proudly shown, and the spectator confirms it. The circle is drawn in ink. There is no doubt about it. The pen (regular Sharpie) penetrates the circle in a realistic manner. It is an unbelievable. If you wish, you can wipe off the ink with your hand at the end and return to the initial state.

The video shows the actual performance by Mr. JONIO at the TMA in Taiwan, uncut. The audience, almost all of whom are experienced magicians, cheered at the point of penetration. I understand. Mr. JONIO's pretense is perfect. From there, this penetration is real shocking.

The elaborate gimmick that has been meticulously designed makes this magic possible. It is precision machined by Kreis. The beauty of the workmanship is always impressive. This coin guarantees natural handling from the beginning to the end of the performance. If there is any unnaturalness, it is the performer's responsibility.

Explanation will be given by Mr. JONIO himself. JONIO is known not only for his solid technical skills, but also for his easy-to-understand explanations. Even beginners will not be left behind. In addition, you can also enjoy a performance in the studio, a live performance at the TMA in the trailer.

Please make this shocking penetration your own.
