## **UNITS by Cigma Magic**

**UNITS**, the unprecedentedly neat invisible thread system, thoroughly revolutionizes the traditional ways the invisible thread has long been used. The innovative design of UNITS will overthrow your pre-existing knowledge about the application of invisible thread, expanding new possibilities and novelties for the manipulation of invisible thread.

With its high-tech system, UNITS makes you capable of making objects hover in mid air or even perform more complicated movements all at your free will! More importantly, physical contact with the invisible thread is not needed; all the movements can be done solely by UNITS. Your ways of performing will be well reorganized and greatly upgraded.

The wireless remote control system installed in UNITS allows you to edit the movements you want on computers and smart phones, which would be performed by UNITS. Once the edition is completed, you are able to produce a variety of floating effects with the remote control of UNITS. Moreover, UNITS benefits magician's assistants to promptly maneuver the invisible thread from distance, corresponding to the requirements of the performance or the formation of the stage. The remote control of UNITS is highly compatible with portable devices equipped with aux 3.5mm sockets. That is to say, UNITS has no problem operating as long as the devices are compatible with earphones.

"The thrill is indescribable when I see this brilliant device."

**- Yu Chen Kuo**

"This will totally change the way you perform"

**- Richie Yang**
