

Everyday Wallet by Mark Traversoni

The **Everyday Wallet** is designed to be just that, an affordable wallet to carry around every day.

It is a modern minimalist design being approx 115mm x 88mm yet still has plenty of space to function as a normal wallet without having to remove items to use it for magic. The wallet is also RFID protected apart from the front window that is meant for door passes etc, so they don't need removing to use.

It is designed with 2 main purposes in mind.

The first as a card to wallet that needs no slider to guide the card, or any get ready.

The second as an object (ring, coin, folded card etc) to sealed envelope that can be carried ready to go.

The wallet has plenty of space, having 5 cards slots, 2 larger pockets as shown in the images perfect to carry packet tricks, more cards or extra prepared envelopes and a zipper compartment for cash which does not hamper signed card or envelope removal from it.

Supplied:

- Wallet (contents in images not included)
- Plastic dividers for envelopes
- Supply of envelopes to get you going.
- Online tutorial
