

## STEEL by Rasmus

The First Real-Time Nail Bend in the History of Magic!

**STEEL** is the first real nail bend to date. It is Rasmus's underground method, used by him for many years, to bend real steel nails in real time. The nails can be marked or signed by the spectator before the miracle happens. For the first time in magic, **STEEL** gives you the ability to do the impossible, in front of the spectator's eyes. Mind over matter, mind over **STEEL**.

**STEEL** can be performed on stage or in close-up situations. It is the perfect weapon to project supernatural powers to a spectator (pseudo hypnosis), where the spectator receives the power to bend a real STEEL nail just by hand. Or what about this: the straight nail is in the palm of the spectator. By covering the nail with the other hand and concentrating, the nail starts to bend between the hands of the spectator, without even touching the spectator.

**STEEL** is a professional tool and a reputation maker for every serious metal bender and mentalist.

The nails can be hammered into wood, before the miracle happens. After the nail is bent, it's impossible to bend it back.
