

G.B.JUAN BILL by Juan Pablo (USD)

This is a new method for making a banknote travel, but under these conditions: the banknote or the corner that will be cut for control will never be changed, since everything will be in the hands of the spectator.

GBJuan Bill is designed for lovers of banknote tricks. Everything you need to surprise the audience will be inside your wallet. At the moment you want, you will ask a spectator to lend you a banknote to perform a magical experience.

You ask him to finish cutting a corner of the banknote to keep as a control and without changing the banknote or the cut corner.

Now the banknote disappears from the magician's hands and can travel wherever you prefer. When it reappears, the banknote will be exactly the spectator's banknote, since he will be able to verify that the banknote exactly matches the corner of the banknote he has in his hand. Now the magician takes the cut bill and the cut corner and magically reassembles the bill to return it to the spectator in the same condition as it was at the beginning, that is, whole.

It is very easy to do, and the method is very deceptive, since the spectator's bill is always used without changing either the bill or the cut corner.
