

Tavolo che Vola pro

The magician looks at the elegant table on the stage. He grabs the corners of the foulard that covers it, and after a moment of concentration, the table slowly starts to fly in mid air. A spectator is called on stage to keep the other two corners of the foulard and to see up close the flying table. The audience will be amazed by this illusion!

- It can be disassembled completely.
- A carrying case is supplied. Also provided are a magnetic candlestick and a small box, which are to be used exclusively as decoration for the table top (the magnet is only used to prevent these objects from falling during the flight phases).
