

## Learn the Alphabet by Pilato

This effect has been carefully developed, combining two great magic classics in a single product: on the one hand, the versatility of the Temple Screen, and on the other, the visual power we love, "based on Henry Evans' 3D Advertising" (authorized). This creates the visual and interactive result of **LEARN THE ALPHABET**.

Imagine telling your audience: *"Today we're going to learn the alphabet and have fun too."* You show a colorful alphabet chart, ideal for teaching little ones, but that's just the beginning. The chart also has a special side to tell a funny story about "Rocky, a dog who's afraid of cats," an optical illusion effect, connecting with humor and tenderness.

But the real magic moment comes when you turn the chart over and show three blocks with the letters A, B, and C, each with an image. Then you explain that, with a little imagination, they can bring those images into the real world.

First, you show the letter C for "Colors," and with a flick Magic: A colorful box literally leaps into the third dimension, appearing real. Then you show the letter B for "Balloon," tell them you're at a party, and suddenly, balloons magically appear.

Finally, you show the letter A for "Airplane," make a magical movement, and an origami airplane materializes in front of the audience.

It's a highly visual effect, easy to perform, and capable of holding the attention of both children and adults. Every element is designed to provide an educational, fun, and magical experience.
