

ProKito by Brian Watson

A sleek, modern take on the Okito Box, designed with today's performers in mind. Brian Watson's **ProKito Box** fits right in your pocket and lets you pull off some seriously impressive coin magic.

Brian Watson is a master craftsman known all over the world for hand-crafted Cups & Balls. Now, for the first time in his career, he has turned his attention to coin boxes. These handmade Okito-boxes are works of art, and we at Vanishing Inc. are proud to be the unique distributors of these gorgeous, collectible boxes.

The thing that always ground his gears? They look like magic props. That obvious "I'm a trick box" vibe that screams from across the room. So Brian set out to create the professional Okito Box he'd always wanted, and his obsession with quality shows in every detail of **ProKito**. Forget cheap-looking brass-this beauty is crafted from fine pewter. Brian spent years perfecting the ornate pattern, wanting something that felt both stylish and contemporary without being too flashy.

Here's what really matters, though: **ProKito** feels incredible in your hands. Coin workers will know what we mean the moment they pick it up. It is perfectly weighted to ensure that classic Okito moves-turnovers, loads, the works-flow like butter.

ProKito is slightly wider than standard Okito Boxes. It perfectly holds half-dollar-size coins, but it will also hold an expanded shell as well. This opens up a whole range of possibilities that aren't possible with standard versions of this classic prop.

Don't let the beauty of this prop fool you. **ProKito** is built to be performed with. That's why each set includes an exclusive download featuring five complete routines from Okito Box expert Smayfer Martinez. These routines are stunning, and as well as learning some classic techniques, you'll learn some brand new handlings as well.

Every magician deserves tools that help them, not get in the way. That's exactly what **ProKito Box** delivers.
