

Chain Penetration

Two plates, each with a keyhole in the center, are fixed onto a small stand, and a chain is inserted from above between the two plates. At this point, a key is placed into the holes to block the chain from exiting. However, simply pulling the chain upwards will inexplicably make it melt right through the key!

With simple objects: a chain, a key, and two perforated plates, you'll be able to perform an unforgettable penetration effect!

- Easy to perform and instantly repeatable.
- The plates mounted on the stand have dimensions of 6.3 cm (2,48") x 12 cm (4,72") x 3.5 cm (1,37).
- Carefully crafted. The stand is made of wood, the plates are plastic, and the key and chain are metal.
