

## Money Illusion

The magician introduces a paddle with a mesmerizing geometric design. As it moves in a circular motion, an eerie illusion occurs... a coin seems to appear on its surface! Then, the illusion becomes reality, and a genuine coin materializes. This process is repeated multiple times, producing various coins. For the finale, the magician shakes the paddle, causing the geometric design to visually distort, and then everything is handed out for examination.

- Two specially made paddles, and detailed instructions are supplied.
- The coins used are regular 50-cent Euros (or similar) and are not included with the set.
