

## Face Predication

Perfectly predicts the face the audience creates!

### Phenomenon

Facial parts shaped Inside a round case. Each time shaken the case, the parts move, randomly changing the face. Hand the case to the audience and have them shake it as much as they like without looking at the face. After confirming the completed face, turn over the drawstring pouch on the table-and lo and behold, that exact face is clearly printed on the pouch! You can then hand all the props directly to the audience for checking.

- The prediction is undoubtedly printed on the drawstring pouch (hand-over able).
- No need to prepare multiple predictions.
- Includes a special jig; setup takes just seconds.
- You can also open the case and let them check the facial parts.
