

Jumping Glass (Washable) by The Essel Magic

Two metal tubes, one red and one yellow, are shown to be empty. These tubes, in contrasting colors, are placed far apart from each other. A glass of milk is then covered with the red tube. Magically, the glass of milk appears under the yellow tube, seemingly teleporting invisibly. This astonishing effect is repeated two more times, leaving the audience in awe as the glass of milk continuously jumps between the two tubes.

Materials:

- Two special metal tubes (one red, one yellow)
- Two double-walled glasses
- Two tiny pegs to close the holes.
- A syringe tube
- Use any water-based color (do not use real milk to avoid damaging the props). We don't supply the color as it is easily available from any art supply store.
