

## Marble - Pokerdeck

A piece of marble is a one-of-a-kind creation, the result of millions of years of heat and pressure. The swirling textures and rich shades we see in marble are essentially natural records of Earth's internal energy exchanges. They are rare, mysterious, and absolutely breathtaking.

A collectible design piece and a performance-ready companion, this deck captures a beauty shaped by nature's genius, transforming ancient geological art into a modern set of cards.

To "replicate" the glow and texture of marble on paper, we are applying a cutting-edge process called photolithography, which will bring the marble's signature shimmer and dynamic color play to life as you tilt and move the cards.

- Realistic marble gloss & grain;
- Dynamic lighting effects;
- No compromise on handling.
- 1 of 1000
- Japanese black core paper
- Made in China
