

Bicycle - Laboratory 3000 Playing Cards

Dive into the world of Bicycle Laboratory 3000, a deck of cards that seems to have come straight from a futuristic laboratory. Here, experiments have fused science and mystery: symbols have mutated, and creatures from elsewhere seem to have left their mark on each card.

But where do these creatures really come from? Their existence dates back much further than the year 3000... They are said to be the result of experiments conducted in a laboratory forgotten for centuries. Their name has been lost to time, erased from the archives, as if those who created them wanted to conceal their research.

Yet, certain clues persist...

Each card in this deck contains traces of an enigmatic past. Symbols, marks of experimentation, anomalies that only the most observant will notice.

Some even claim that this game should never have left the laboratory... that it was leaked from a top-secret research facility.

Bicycle Laboratory 3000 is not just a card game. It's a pending experiment, a fragment of a larger mystery... Will you be able to unravel its secrets?

FEATURES

- Printed by the USPCC;
- Air Cushion Finish;
- 2 identical jokers;
- One blank-faced card + one double-backed card.
