

The Haunted Deck PRO Blue by Yim & Carpenter Wong

Haunted deck is one of the strongest card effects you can do - if you can shuffle the deck freely, spread it, dribble it, then place it down for the astonishing moment.

Previously, a handling like the one described above will require you to master the subtle art of invisible thread, which is not that easy. You also face the risk of the thread snap during the routine, leaving you in a very awkward position. This can happen to even the best thread handlers in the world.

To those who love this effect and want a version that allows you to handle the deck with great freedom, and has a mechanically based gimmick part so all you need to do is pressing the button. We present to you:

Haunted Deck PRO - the thinnest, mechanical haunted deck gimmick!

This gimmick looks and feels exactly like a half bicycle deck! You can even riffle it! Add another 15 normal cards to it, you will have a "normal" deck that you can handle quite freely.

A very precise gear reduction motor will do all the work for you. It's the first time such a prediction-made motor is used in this kind of effect. We can also guarantee this is the most silent, motor-based haunted deck gimmick in the world.

The remote control is small, easy to carry around, and has a magnetic part.

This is **Haunted Deck PRO** - realistic, reliable, with nothing that may break. We have removed all the risky aspect of Haunted Deck, leaving you a strongest card effect.
