

Futterfly Playing Cards

So here they are, the new Futterfly Playing Cards. They are edge printed with deep black color using new edge printing technology developed by Cartamundi and their partner company in France.

Not only does the edge printing protect the quality of the cards, but it also enhances the pack's magical features, and defends against humidity and hand moisture that so often weaken un-edge-printed cards along their vulnerable edges.

Futterfly decks include 54 cards and a double-backer. They are printed by Cartamundi on Slimline Card Stock with the True Linen B9 Finish. These cards are not marked which makes them suitable for card games.
