

Black Lips by Julio Montoro, Victor Sanz, and Ultrabello

Black Lips

turns a simple black sticker into a real, physical black hole. A borrowed and signed bill receives a round black sticker... and that sticker becomes a Black Hole through which objects can genuinely pass.

In the end, the black hole collapses back into a regular sticker, and the signed bill is left completely intact and fully examinable without any switch.

What's included

- **Black hole stickers**
- **A handmade gimmick crafted in Spain**
- **Fully customizable system to adapt the gimmick to any currency in under 3 minutes**
- **Full video tutorial by Montoro & Sanz**

Black Lips is fast, visual, and entirely practical. Pure impossibility delivered in the cleanest way imaginable.
