

Stealth Retractor by John Kennedy

Stealth Retractor

is the world's most compact electronic invisible thread reel. It's precision built from solid brass and uses Kevlex, the super strong invisible thread.

Stealth Retractor is the ultimate device to make things rise up to your hand or move on a table. It only pulls when you want it to; you have complete on and off control at all times.

Included is a spool of 10 feet (3 meters) of Kevlex thread. Extra spools of thread are available at a reasonable price (see the accessories tab above).

The battery is also included, and will last for more than 100 performances. New batteries cost less than 50 cents each on the internet.

John Kennedy will teach you these amazing effects:

Rising Card: A freely chosen card is shuffled into the deck. Hold your hand above the pack and the card rises up to your fingertips. Any deck of cards can be used, even a borrowed deck.

Magnetic Napkin: A paper napkin is resting on the table. Move your hand near it and suddenly the napkin twitches. Now you reach over with your other hand and the napkin jumps into your hand.

Page Flip: Wave your hand over an open magazine or book and a page flips over like magic.

This is the most improved and reliable Stealth Retractor we've ever built, and we've priced it lower than ever.

John explains what makes Stealth Retractor different from other invisible thread reels...
