

Champagne Supernova (U.S. 50) Matthew Wright

The **Champagne Supernova** breathes new life into a classic close up illusion.

Matthew Wright has been secretly working on this effect for ten years and is finally ready to share it with the magic world.

An easy-to-do miracle that allows you to push a Sharpie pen straight through the middle of a borrowed signed coin. A never-before-seen method means that you can now show both sides of the coin at all times before, during and after the effect.

Multiple handlings and routines are taught, including signed coin variations as well as "The Portable Acme Hole" routine by Sharpie pen maestro, Tom Crosbie.

This is an effect that can be mastered by all skill levels with very minimal sleight of hand.

This ingenious gimmicked set does most of the work for you, allowing you to concentrate on performance and presentation.

Comes in various currency including US half Dollar, US quarter, UK 50p, Euro 50c and 10 Japanese Yen.
