

Ultimate Card Frame with Remote Control by Sorcier Magic

Now you can perform Card Thru Frame with confidence!

A transparent frame is shown on both sides. A card is selected. After inserting it inside the deck, it is thrown against the frame. The chosen card will be the only one to have crossed the frame! It is literally on the opposite side of the frame! We present the thinnest card frame ever made. It measures 32 x 21 centimeters and has a thickness of only 1 centimeter.

A real stunner!

Equipped with a small removable rear stand for easy transport.

It works with remote control.

Video instructions attached.
