

Remote Control Flying Silk by Quique Marduk

This is the classic device to make a silk fly on stage, in or out.

The silk can go in straight line or rotating around a stick, microphone, etc, giving the impression that it comes and goes.

You can use it manually or with its remote control.

The control has a range of over 20 meters.

The mechanism is smooth and very silent, the spool has an extremely thin but highly resistant monofilament with a length of 30 feet.

It has the option of attaching two safety pins to it so you can hang it on your jacket, on your table, or on curtain at the side of the stage.

Works with a regular 9 volt battery. Control has battery included.

Silk and 9 volt battery does not included
