

## **Gift Game (Close up Version) by Astor**

Looking for a routine that's easy to perform, interactive, and always gets big reactions? This trick is guaranteed to leave a lasting impression!

### **How It Works:**

Three randomly selected audience members mix up four envelopes and place any colored chips on any envelope. They then freely choose three numbers between 1 and 4. The double sided colored number cards are mix with a random shuffle, then divided in two piles then split each pile in two again.

The matching colored number on the top of the piles are placed in front of the envelopes, matching the colors of the numbers to the colors of the chips. This process determines the color and number of each envelope. The envelopes they choose contain small, low-value gifts, or the magician business card-but the envelope they leave behind holds a banknote!

Easy to master and perform!
