

Castle Wallet by Simon Lipkin

When it comes to peek wallets, **The Castle Wallet** stands alone.

A modern, hard-case credit card holder engineered for one purpose: **certainty**.

Designed from the ground up by **Simon Lipkin**, The Castle Wallet allows you to **peek and write directly onto a card**, not removed, not isolated, but **held inside the wallet, sandwiched between other cards**. Exactly where it should be.

No electronics.

No lighting restrictions.

No compromises.

Over the course of nearly two years, we worked closely with our manufacturer, refining every detail until the wallet performed exactly as intended. The result is a tool that delivers **instant access**, total reliability, and with complete confidence in real-world conditions.

This is a wallet built for the modern performer - discreet, practical, and devastatingly effective.

Included with your purchase is a **full, in-depth tutorial**, where Simon teaches his personal, hard-hitting routines and shows you how to extract maximum impact from this elegant device.

The Castle Wallet

A new standard in peeks.

Designed to be trusted.

**Although The Castle Wallet has been carefully designed to accommodate both standard business cards and 1914 Billets, as business card dimensions can vary across the world, you may find that a slight trim to the length of your cards ensures a perfect fit within the wallet.*
