

## Power Stack by K C

What's inside an AA battery?

It's a very simple question, but most audience members can't answer it easily. POWER STACK creates a powerfully memorable moment by answering this question in a clever and surprising way.

A Duracell battery-which the audience is free to examine and verify-transforms right before their eyes into several small button batteries.

It's like a modern reinterpretation of the classic "exploding dice" magic trick using an everyday object.

The moment the button batteries spill out of your hand and scatter, the visual impact is immediately striking.

Designed as an EDC (Everyday Carry) item, it fits easily in your pocket, and with a quick setup of less than 5 seconds, you can perform it instantly.

It is optimized for social media and short-form content, and delivers striking visuals in live performances as well.

Its lightweight and compact design makes it ideal for close-up magic that can be performed effortlessly anytime, anywhere.

? Note: You must provide 12 LR43 button batteries and a Duracell AA battery separately.
