

Capsule by Million & Egg & TCC

Blackpool 2026 New Release!

A Tiny System for Unlimited Imagination.

Fantastical effects such as fire-breathing, teleportation, floating, and flying have long existed only in TV and movie scenes. Today, these shocking effects are being brought into reality by more and more magicians. Among them, levitation effects are particularly favored by magicians and audiences alike. This time, we are delighted to introduce a tiny and lightweight system to you: Capsule from Million & Egg.

This miniature levitation system allows you to float empty water bottles, headphones, or cigarettes, and perform a flawless Hummingbird Card. It is designed to be your "everyday carry" miracle, allowing you to start a performance anytime, anywhere.

Capsule features a custom, self-developed IT by Million & Egg. They've addressed some of the biggest pain points for magicians:

- High-Performance Strength: Stronger than traditional IT.
- Ultra-Thin Profile: Virtually invisible.
- Durability: Engineered to be more resilient, making your levitations smoother and your setup more reliable.

The reason why it is named "Capsule" is not only because its appearance is highly similar to a capsule, but also because it has the core characteristics of being small, portable, and impromptu. A small capsule, though seemingly inconspicuous, can burst out infinite magic power and stimulate your unlimited magic imagination.
