

Coin Shot by Alex Latorre

Coin Shot

by Alex Latorre is a practical, visual take on one of magic's most iconic plots, The Coin in Bottle.

The effect is simple but blows people away every single time.

A coin is held at the fingertips and tapped against an empty bottle. On the final tap, the coin visibly penetrates the bottle.

You unscrew the cap, tilt the bottle, and pour the coin straight into their hands.

This incredibly clever method lets you perform the cleanest coin-through-bottle we've ever seen, and it uses a real coin and a real bottle.

Alex has designed a brilliantly engineered gimmick that does most of the work for you, making this perfect for close-up, table hopping, and walk-around performances.

No switching the coin. No funny moves, and they can examine everything.

Easy to perform

No gimmicked coins

Works with a real, examinable bottle

The coin really ends up inside the bottle

They can even pour the coin out of the bottle themselves

This takes one of magic's most iconic plots and gives it the clean, practical method it always deserved.
