

Ether by MS Magic

Introducing **Ether - The Sound of Illusion** produced by XQ, Stephen Chen & MS Magic

Ether is a revolutionary, self-contained coin magic built to create hyper-realistic coin tap sounds, letting you perform stunning, lifelike illusions exactly the way you imagine.

With **Ether**, you can mimic the crisp sound of a coin being struck-allowing you to "tap" an invisible coin in the air, produce the sound, then visually make a real coin appear out of nowhere. You can also perform smooth coin transpositions, multiple coin productions, and clean coin color changes (switching between different currencies) with endless variations.

Best of all, **Ether** is completely mechanical: no electronics, no magnets. It is self-contained, easy to use, highly practical, and fits naturally into any close-up coin magic routine.

Professional, reliable, and incredibly versatile, **Ether** is a must-have for every close-up magician and coin magic performer.
