

PITATA Smart Chalkboard - Bühnentrick

The Next Generation of PITATA Impression Pad

The PITATA Smart Chalkboard represents a significant leap in impression technology and is designed to look and feel exactly like a standard chalkboard, while housing our most advanced impression technology.

Its function is the same as the other PITATA Impression devices, like the PITATA Smart Clipboard, Whiteboard, and Memopad, and it can also be used with the new PITATA Photo Prediction & Infinite Tag.

- "Inversion Board" Design: Crafted to resemble the PITATA Inversion Board. You can write on both sides, with the front side serving as the impression surface. To your audience, it is simply a piece of stationery, and it cleans easily with a normal tissue paper.
- Always Ready for Your Show: Features a 2-week "Always-On" standby time. You don't need to turn the board on or off during your set. It stays active and ready to connect to your phone or receiver instantly. You can focus entirely on your performance rather than your tech.
- No Charging Writer: The chalkboard uses a specialized chalk protector/shell that requires no charging. As long as the board has power, the chalk holder is ready to go.
- Use Regular Chalk: It is compatible with regular 10mm diameter chalk, which can be easily found in stationery stores or online.

App Compatibility: The board is fully compatible with all existing PITATA app ecosystems and supporting products, like the PITATA App, PITATA Pro App, and Palm Peeker/Pro.
