

I.S.Y.C by T-Tech - Bühnentrick

A Magician's Dream Effect, Now A Reality!

Imagine handing a deck of cards to your audience. They examine and shuffle it. A spectator freely selects a card (or multiple cards). You never touch the deck. You don't look at the faces. You can even turn your back the entire time. Yet, you instantly name the exact card they chose.

Everything is examinable before and after. No assistants. No pre-show work. No compromises.

I.S.Y.C. turns one of magicians' purest dream effects into a reliable, repeatable reality.

What Is I.S.Y.C.?

I.S.Y.C. (I See Your Card) is a professional electronic divination system that allows you to identify one or multiple freely selected cards, without touching or looking at the deck.

The cards can be fully examined. The deck can be freely shuffled. The magician can face away during the entire selection process. The reveal is 100% accurate, every single time.

Beyond Traditional Methods

For decades, magicians have relied on compromise to achieve this effect: marked cards, stacks, forces, or stooges.

They work, but they are never truly clean.

The audience cannot always shuffle freely.

The cards cannot always be inspected.

The performer is always managing limitations.

We wanted total freedom. After experimenting with countless approaches, we finally arrived at this solution: I.S.Y.C. by T-Tech.

Total Freedom: The cards can be handled, shuffled, and examined by the audience before and after.

100% Accuracy: Identify multiple selected cards simultaneously.

Zero Compromise: No stooges, no assistants, no pre-show.

Repeatable: Perform it immediately, as many times as you like.

The Engineering Behind the Miracle

As you likely gathered from our trailer, our greatest hurdle during development was embedding a micro-chip into a playing card while preserving its slender profile, a challenge that perplexed our team for a considerable period.

While we encounter similar technology in everyday items like credit cards, that level of thickness is fundamentally unsuited for card magic. If a playing card feels even slightly unnatural, the audience will immediately sense an anomaly, rendering the performance impossible. To overcome this, we consulted extensively with hardware industry professionals to master the underlying principles of high-frequency technology and the complexities of custom software engineering.

Ultimately, we arrived at a breakthrough: a custom-engineered identification chip of unparalleled thinness, roughly one-tenth the diameter of a human hair. To support this, we developed a dedicated receiver that ensures a perfectly stable, interference-free connection with 100% recognition accuracy.

Even then, we sought further perfection. After the assembly of the internal components, each chipped card is placed into a high-pressure composite press for final compression. This allows us to push the boundaries of thinness to the absolute limit.

The result? A card that remains virtually indistinguishable from a standard playing card in both look, weight, and snap.

Hidden in Plain Sight

The Cards: The system is embedded inside the playing cards, yet it preserves the snap, weight, and feel of a normal deck. You simply cannot tell the difference.

The Receiver: A dedicated, high-speed receiver is built into a premium leather Close-Up Pad. This ensures a 100% stable, interference-free connection and instant recognition.

More Than One Card. More Than One Effect. Identifying a single card is just the beginning.

I.S.Y.C. can recognize up to nine cards simultaneously and even track their specific order. This opens the door to powerful routines beyond simple divination:

- Multi-spectator selections.
- Lie detection routines.
- Telepathy experiments.
- Psychological demonstrations.

There is no technical difficulty to manage. You simply focus on your presentation.

What's Included

1x Leather Close-Up Pad Receiver (32 × 23.5 × 1.3 cm). Color Black.

1x Ultra-thin Electronic Deck (Full Deck of 54 Cards). Back Design: TCC Triumph Back. Color Red.

1x Digital Display Unit (40 × 30 × 18 mm)

1x Charging Cable

Technical Specifications

Usage Time:

Close-up Pad: 8-10 days standby (from full charge).

Display Unit: 3-4 hours of continuous active use.

Charging Time:

Close-up Pad: Approx. 2 hours.

Display Unit: Approx. 1 hour.
