

VIRT by Homerlin

READ ANY PHOTO.

LIVE, ON STAGE.

VIRT uses advanced AI to turn any spectator's photo into a flawless mentalism revelation. Fast, reliable, and designed for real-world performance.

VIRT turns any spectator's phone into an undetectable intelligence asset. They photograph anything - an object, a page, a card, a drawing. You receive structured revelations in real time via VIRT AI, which takes the role of a professional mentalist to give you the necessary script in real time, both visual and auditory, to efficiently and surprisingly reveal the photograph taken. Imagine for example a Book Test with gradual revelation of the content or images from the page, even intelligent revelation of the book title and author... The possibilities are infinite and our AI will squeeze all the juice out of the photograph taken by the spectator themselves!

VIRT includes a multilingual system offering both interface and revelations in six languages: English, Spanish, Italian, French, Portuguese, and German, allowing you to adapt to any audience.

What's included?

- Lifetime license allowing up to five shows per day, expandable according to your needs.
- NFC card to streamline the use of the application.
- A complete instruction module inside the app to master both its operation and performance handling.
