

PITATA Inversion Board ULTRA - Bühnentrick

Over the past months, we've continued refining the Inversion Board based on real-world performance and customer feedback.

The result is the new PITATA Inversion Board ULTRA — featuring an integrated touch control system, built-in interface, and numerous hardware and software improvements.

What's New in the ULTRA Version?

Building upon everything that made the original Inversion Board so powerful, the ULTRA introduces:

Integrated Touch Control System.

Built-in User Interface.

Faster and More Intuitive Operation.

Streamlined Performance Workflow.

Refined Hardware and Software Experience.

Designed for real-world performers, the ULTRA delivers a smoother, more efficient, and more powerful experience while preserving the reliability of the original system.

The PITATA Inversion Board ULTRA is our new high-end mentalism tool designed to rewrite what you know about the electronic impression board.

Instead of merely secretly capturing what a spectator writes, it now allows the performer to instantly secretly input the information directly with the board itself, with no external devices needed.

The information appears on the board as if it were a pre-written, completely natural-looking "prediction."

Now, you can even "erase" the "writing" on the board with your fingers.

Also, features Wireless MagSafe-style charging.

PITATA Inversion Board ULTRA still maintains all the functionality of the original PITATA Inversion Board and also integration with the PITATA Pro App and PITATA Ecosystem.

Crafted with a solid wood frame, the device features a real, writable surface on one side and a hidden, ultra-high-contrast ePaper Touchscreen display on the other. It is built to seamlessly blend into close-up, parlor, or stage environments without raising any technical suspicion.
