

Depiction by Paul Carnazzo

Depiction

is the perfect effect for any mentalist or magician to carry in their wallet or pocket! A compact Design Duplication routine (with nothing ever drawn!) on a single wallet card.

Images are used frequently in telepathy tests because they are easy to visualize and transmit. The **Depiction** card shows twenty-four, easy to recognize and easy to visualize items. A participant mentally selects one.

The performer explains that by forming a simple mental image, and visualizing it in a particular way, the likelihood of a successful test is increased.

After the participant is guided through a brief visualization process, the performer is able to name the exact item the participant selected! The following is true about **Depiction**:

- No progressive anagrams
- No force
- Durable, 100% plastic card
- Extremely deceptive
- No language restrictions
