

Teleport – Color E-Ink Reveal Device by Electricks - Bühnentrick

•^a Multi-color e-ink display – optimized for red/black poker card reveals

•^a Hands-free reveal – spectator can hold Teleport

•^a Ultra-flat design – hides in neck holder (included) or wallets

Works even better with Atom

Teleport is a breakthrough color e-ink reveal device designed for professional magicians. Sleek and ultra-thin, it can be worn in the included neck holder or concealed in a custom wallet, making it ideal for bold, hands-free, impossible predictions.

Teleport reveals cards, words, numbers, clocks, and even images — using a 4-color e-ink screen optimized for magic. It supports black, red, yellow, and white — ideal for realistic poker card reveals and post-it-style predictions. It's the only magician device on the market capable of showing red suits and figure cards (Jack, Queen, King), along with realistic hand-written text reveals on backgrounds that mimic lined paper or iconic yellow post-it notes.

Teleport updates wirelessly via Bluetooth – giving you true distance control. Once a new image is sent, you'll get discreet feedback that the update is complete.

NEW: TrueWrite Neural Handwriting Engine

Your predictions just became impossibly real. TrueWrite transforms any text into authentic handwriting with neural-powered variation – every letter looks uniquely human, never repeating patterns.

Three authentic styles included FREE:

Marker – Bold black strokes on white

Post-it – Handwritten notes on yellow sticky notes

Chalk – White chalk on blackboard

Watch spectators' minds melt when the text they see you write on your Pitata pad appears in THE EXACT SAME handwriting on your prediction. No fonts. No templates. Pure, natural handwriting that passes any scrutiny.

Real-World Magic, Limitless Application

With Teleport, your reveals are never confined by props or proximity. You can:

Display a freely named card – red or black, even J/Q/K

Reveal a word or number prediction on a paper-like background (e.g. yellow post-it)

Send a hand-drawn clock or photo of a pocket watch

Draw or write on an impression pad and show the result on Teleport

Control it with remotes like Atom, Wilson Nexus, or Thoughtcast Versa

Perform without a phone – using Atom as your only tool

All of this happens wirelessly. No need to go near the display after placing it in full view.

Works Even Better with Atom

Want to go fully hands-free and phone-free? Atom Remote is the perfect companion to Teleport. Use it to:

Trigger reveals from your pocket

Send pocket watch photos, hand-drawn clocks, and playing cards

Perform solo with no phone, no assistant – just pure power at your fingertips

Combine Atom and Teleport for the ultimate stealth setup – no phone needed on stage, close-up, or anywhere in between.

Smart Ecosystem Integration

Teleport is part of a powerful system built around the free PeekSmith app and Atom remote. Through these, you can integrate with the most advanced tools in modern magic:

the PeekSmith App lets you type or transmit text, numbers, cards, or images from your phone or assistant, or send drawing input from impression pads as character recognition is built into the PeekSmith app — when used with supported impression pads, your handwritten input is recognized and displayed instantly on Teleport.

Atom Remote lets you send content without a phone: use it solo to trigger reveals (cards, watches, clocks, etc.)

Compatible Impression Pads via PeekSmith App:

Mindbuster boards

IARVEL Pads

Oracle Board

Telepathy Pad

Oblivious / Academy Pads

Wacom Bamboo Slate / Spark
Pitata Boards

Compatible Magic Apps via PeekSmith App:
Inject
WikiTest
and much more

Wonderful Battery Life and Durability

Teleport's e-ink technology ensures ultra-low power consumption. A single wireless charge can last for months or power over a thousand screen updates, giving you complete peace of mind, even during long events.

What's Included:

Teleport Color E-ink Reveal Device
Wireless Qi Charger
Charging Cable
Neck Holder

Compatible with Devices:

Atom Remote
Nexus, Versa, SB Mote, and other compatible remotes
Inject, WikiTest, and other apps (via PeekSmith App)
Impression Pads with text recognition (via PeekSmith App)

Apps

PeekSmith App (iOS & Android)

Specifications:

Display: 46mm × 80mm
Device: 57mm x 100mm x 4mm
Neck Holder: 75mm x 125mm x 6mm
Update time: ~22 seconds per reveal
Battery life: up to several months per charge (thousands of reveals)
Charging: Wireless Qi charging
