•^a Works with magic apps, watches, pads, remotes, and custom setups

•^a Now supports 50+ languages with Unifont

•^a Easy to hide, no palm required

Control it your way – works as a screen for Atom 2

Introducing our Electronic Peek Device

PeekSmith 3 is a miniature state-of-the-art electronic peek device like no other in the magic market. Proudly used for mentalism shows by professionals worldwide such as Colin McLeod, Jan Forster, Jonathan Levit, Shawn Farquhar, Ryan Tricks just to name a few.

Designed by magicians for fellow performers, the PeekSmith 3 is the flagship device of our product line. It enables covert access to information from a variety of sources, including other devices and apps. Equipped with a high-resolution color screen, vibration motor, and intuitive input buttons, this device is a must-have for any serious magician.

What You Can Peek

PeekSmith displays whatever your apps and devices send it — playing cards, words, names, numbers, PIN codes, drawings, dice values, zodiac signs, times, and more. The color screen shows text, card graphics, drawings, and emoji. The vibration motor can silently thump values to your hand.

Compatible Apps

PeekSmith works with 40+ magic apps over Bluetooth and Web Polling:

Inject 2 (Greg Rostami) — Real-time information injection

WikiTest (Marc Kerstein) — Wikipedia-based tests

Pi Revelations (David Penn) — Pi digit divination

Cognito (Lloyd Barnes) — Psychological forces

Cipher Pro — Encrypted message reveals

Picasso Pro (Ellusionist) — Drawing duplication

Hydra (Ellusionist) — Multi-phase routines

Novus (Ellusionist) — Card magic utilities

DiceSmith (Benke Smith) — Dice control and display

TimeSmith (Benke Smith) — Time prediction routines

CubeSmith (Benke Smith) — Rubik's cube solving

See the full list on our Compatibility page.

PeekSmith also connects directly to smart dice, card readers, impression pads, scales, and more without needing a phone. See Standalone Mode for all supported devices.

PeekSmith App

Available on iOS and Android, the free companion app for PeekSmith 3, Bond, MrCard, Teleport, SB Watch 2, and other Electricks devices.

The PeekSmith app collects information from apps, devices, and web services — and delivers it to your peek device in real time.

It turns PeekSmith into a powerful performance tool with a growing set of capabilities, including:

Input screens — Enter numbers, text, time, zodiac signs, cities, or spin a customizable wheel.

Thumper — Your assistant types text, selects cards, or triggers vibration patterns.

Doodle board — Draw on screen or connect impression pads like Mindbuster and Bamboo Slate.

Web Thumper — Receive information from anywhere in the world.

Web integrations — Connect your own custom data sources.

Transform — Convert raw input before it reaches your device.

NFC/RFID reading — Read tagged cards with your phone or Insight reader.

Add-ons — Text-to-speech, AI, external displays, Apple Watch output, and more. Some add-ons available separately.

Standalone Mode

PeekSmith 3 works without a phone. Connect directly to other Bluetooth devices and start performing — no app needed.

Dice — Spotted Dice, Kinetic Mental Dice

Card readers — Insight and Insight Pro

Impression pads — Mindbuster, Telepathy Pad, Audience in Wonderland, and more

Watches — SB Watch

Scales and sensors — Rainman 2, SoulMate, Scrabble, Ray, GhostMove

Remotes — Atom 2 and Quantum Calculator

All settings — brightness, vibration patterns, button actions, display format — are configurable on-device using the three buttons. New devices and features are added through firmware updates.

Hiding Tips

It is palmable and also fits in a card box or in the several amazing accessories available. In your pocket, you can peek at it blindfolded or feel the signals from compatible apps and devices.

Continuous Improvements

We continuously collaborate with leading magicians and creators to expand compatibility and enhance both firmware and the companion app.

Advantages

PeekSmith is designed by magicians, for magicians. It stays on permanently so you can get your peek at a glance whenever you need it. Unlike smartwatches, the screen remains visible and optimized for performance conditions.

It is compatible with many apps that have no smartwatch support and can be hidden in places where other devices cannot — like card boxes or your pocket.
