

Pocket Rocket (ITR Model) by Steve Fearson

Thread reels are all about convenience-and what could be more convenient than carrying your ITR right in your pocket?

Until now, your pocket wasn't always the most practical place for it.

Introducing the **Pocket Rocket**, Steve Fearson's precision-designed thread guidance system created to make your favorite ITR easier, faster, and more convenient to use.

The Pocket Rocket securely positions your reel inside your pocket while guiding the thread exactly where you need it. The end remains easily accessible and ready to grab whenever it's time to perform.

And it's incredibly discreet. All your audience sees is the tip of a **genuine Sharpie® marker cap** barely peeking out of your pocket. When you reach for the ball of wax, it simply looks like you're casually adjusting the marker in your pocket.

No fumbling. No searching. Just reach, grab, and you're ready to perform.

The **Pocket Rocket** works with your own ITR and Sharpie marker cap, so you can use the reel you already know and trust.

You provide the ITR and your favorite-color Sharpie cap.

We provide the ingenious Pocket Rocket that makes it all work.

Simple concept. Clever design. **A better way to carry and access your ITR.**

Note: *ITR and Sharpie marker cap not included. Brief instructions included.*
