

Sucker Pizza Box

The magician shows a pizza and a panel with two compartments. As the audience watches the pizza seemingly slide from one compartment to the other, they think they've figured out the secret. So they loudly point out where they believe the pizza is hiding inside the panel. However, just when they think they know how the trick works, the pizza completely vanishes from the panel, leaving everyone amazed!

- A classic that always goes over well with audiences and is especially loved by children.
- The panel is 33 cm long, 14 cm high, and 1.5 cm thick. The pizza has a diameter of 10 cm.
